

## **BYTECODE ALLIANCE INTELLECTUAL PROPERTY POLICY**

1. All new inbound code contributions to projects maintained by the Bytecode Alliance shall be licensed under the Apache License, Version 2.0 (<https://www.apache.org/licenses/LICENSE-2.0>), with the LLVM license exception (<https://spdx.org/licenses/LLVM-exception.html>) (the “Project License”).
2. All outbound code will be made available under the Project License.
3. The license for all upstream dependencies of a project shall be consistent with the project’s outbound license.
4. If an alternative inbound or outbound license is required for compliance with the license of an upstream open source project, or otherwise to advance the Bytecode Alliance’s mission, the Board may approve the use of alternative licenses for inbound or outbound contributions to particular projects on a case-by-base basis.
5. All documentation will be received and made available by the Bytecode Alliance under an appropriate open license, including but not limited to the Creative Commons Attribution 4.0 International License (<https://creativecommons.org/licenses/by/4.0/legalcode>), the Creative Commons CC0 1.0 Universal Public Domain Dedication (<https://creativecommons.org/publicdomain/zero/1.0/legalcode>), or the Project License.
6. All existing projects evaluated for contribution to the Bytecode Alliance shall be licensed in their entirety under one or more open source licenses approved by the Open Source Initiative. If the license for a contributed project is not the Project License, Board approval shall be required.
7. When an existing project is contributed to the Bytecode Alliance, ownership of any trademark and logo assets that the project intends to continue using must also be transferred to the Bytecode Alliance.
